

SANY SAFE

The best solution for the environmental sanitization

Why SANY SAFE?

EFFECTIVENESS OF ENVIRONMENTAL SANITIZATION

The sanitization technique used with hot vaporization / aerosolization, allows to spread in the environment invisible micro-particles that atomized in the air, are capable to penetrate in every silt, eradicating all bacteria, viruses, germs, fungi and molds already present in the air and on surfaces.

READY TO USE

Connect SANY SAFE to the electricity and you will get an automatic sanitization of your environments every night, thanks to the weekly pre-programming.

EASY TO PROGRAM BY THE APP

SANY SAFE has a programmed weekly schedule, which allows an immediate use. Thanks to the simple and intuitive configuration APP, you can, at any time, manage SANY SAFE and customize volumes, frequency and intensity of the system.

TANK REPLACEMENT IN AUTONOMY

The external tank has been designed to allow the user an independent and quick replacement in total autonomy. It is available in different sizes: 5, 10 or 25 liters to perform many sanitization cycles, according to your needs.

LONG AUTONOMY, UP TO 8 MONTHS

SANY SAFE, depending on chosen type of sanitization and of the tank size installed, it is able to ensure an autonomy that can reach even up to approximately 8 months (with a low intensity sanitization - once a week - 100 m³ environment - 25 Liters tank).
